

COMMUNITY RESOURCE CENTRE

ESTABLISHMENT OF COMMUNITY RESOURCE CENTRES

The Southern African Housing Foundation Development Trust has been approached to establish community resource centres in Namibia and South Africa.

The SAHF Development Trust requires access to suitable land to construct resource training centres. An architectural competition will be launched for architects to submit draft design proposals for eco friendly resource centres. The competition will be adjudicated and widely publicised.

Building materials will be procured for the construction of the building and skills training will be provided during the construction phase. A Brick making plant will be set up in order to train participants in the skill of brick-making.

The SAHF Development Trust will introduce a phased approach to adult education courses, child minding and aftercare for children. Each Resource Centre will have a youth centre, library and recreational facility as well as offering the opportunity for learners to do their homework after school.

Resource centres will be staffed by qualified personnel to provide the necessary services to the community. Grant funding is required to support the sustainability of these facilities.

If you can offer assistance in the form of professional advice, provision of goods or sponsorships, please contact:
